

The UC&C Approach Everyone Agrees On

Working from anywhere and everywhere is the reality for many.

The effectiveness of teams in an organization remains a problem for some organizations

regardless of how extensive their technology implementations have been.

Whether your organization has already deployed a cloud-based UC&C solution or is just considering one, learn how to make it a success.

Any Way You Look at It, Solution Management Matters

One thing IT and business leadership agree on is how interested they are in working with a managed services provider for their cloud-based UC&C solution:

77%
of IT leadership say they are very or extremely interested

74%
of line-of-business leadership say they are very or extremely interested

Overall, three-quarters (76%)

of organizations are very or extremely interested in working with a managed services provider for their UC&C solution.

This increases to

96%

with companies currently using a UC&C solution.

From minimally connected organizations to those with extensive connectivity solutions, using managed services providers is seen as crucial to success:

75%

of organizations with minimally deployed connectivity solutions are very or extremely interested in using a managed services provider

86%

of organizations with extensive connectivity deployments across the organization are very or extremely interested in using a managed services provider

It Isn't About Just One Need, It's About Many Needs

Bringing a UC&C solution into an organization's work environment is something IT is confident about:

Seven out of 10 IT leaders

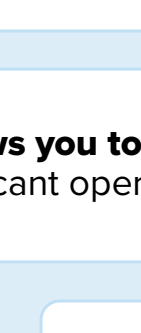

see themselves as very or extremely prepared for UC&C, specifically when it comes to planning, implementation, and operation

Despite preparedness, IT leaders find they ultimately need help from managed services providers for many aspects of UC&C projects.

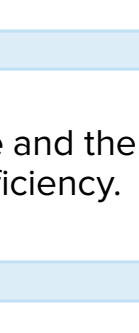

Among the areas where IT leaders seek help:

Level-one support

Engineering support for reporting and audit requirements

Call center

Day-to-day change requests

Other complexities of support and implementation

UC&C Is Worth the Spend

8 out of 10 (84%) organizations

currently using a cloud-based UC&C solution

plan to continue current cloud-based spending or increase it over the next 12 – 24 months.

User Insights

The hybrid workforce is going to stay. So, there is no other way than using this kind of cloud-based unified communication system.

[UC&C] allows you to integrate and there is a significant operational efficiency.

Director, IT, Water & Sewer Co.

The biggest benefit is that we have zero data disruption now.

Head of IT, Healthcare Testing & Analytics Co.

The scalability definitely is [something] I don't have to worry about.... you don't have to worry about size of the infrastructure to keep up with the company scaling.

The Whole Picture

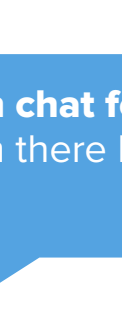

For many organizations, the ultimate benefits of cloud-based UC&C will be inextricably linked to managed services.

Managed services are seen as a top 10 must have solution

among those that currently use cloud-based UC&C and those planning to use one.

The challenges that organizations face when it comes to communications and collaboration today are real:

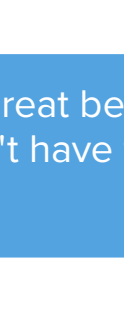

28%

Security threats

26%

Constraints on IT budgets, skills, or time

25%

Implementing technology that improves the customer experience

Hybrid on-premises and cloud-based deployments add even more complexity:

53%

of organizations are currently using/considering a hybrid approach to UC&C

(leverages on-premises PBX and cloud-based UC&C solution)

1 out of 5 organizations

see integration of business apps as mission critical to a UC&C purchase.

With chat features and new features, I'm expecting great benefits from there because [with] integrated solutions, we don't have to do point solutions.

VP, Information Security, Insurance Company

Businesses See Room for Improvement

70%

30%

Only 30% of organizations using cloud-based UC&C solutions are very satisfied, leaving room for improvement.

Today's implementations stand to benefit from managed services:

43%

of organizations can say they experienced significant benefit to the quality of customer engagement

37%

can see how they now have the ability to support new IT/business initiatives (i.e., analytics, IoT, etc.)

30%

can say they experienced significant benefit to remote/hybrid worker productivity
